PROFILE

I'm a Software Engineer specializing in building engaging and user-friendly front-end applications using React, Javascript and CSS. My focus is on creating seamless interfaces while continuously growing my back-end expertise in Node.js, Express, and databases like SQL and MongoDB.

With a solid foundation in front-end technologies and a passion for solving complex problems, I aim to contribute to impactful projects that bridge user needs with technical solutions.

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER @ FASYL GROUP

June 2024 - December 2024

As a Software Engineer at FasyL Group, I focused on developing and optimizing client-facing applications. My role allowed me to contribute significantly to the development and maintenance of a client-facing support portal, leveraging a range of modern technologies to streamline customer interactions and enhance operational efficiency.

Support Portal Development: Designed, developed, and maintained a robust client-facing support portal using PHP, MySQL, HTML, Bootstrap, and JavaScript. This solution improved customer interactions and streamlined support processes for enhanced service delivery.

Collaborative Development: Partnered with cross-functional teams to gather user requirements, design scalable technical solutions, and troubleshoot system issues. These efforts enhanced both the support portal's functionality and its integration with the core banking system.

Oracle Database Integration: Leveraged Oracle database technologies to manage and query data effectively, ensuring seamless integration of the support portal with Oracle Flexcube for a unified enterprise banking experience.

Technical Support and Training: Provided hands-on technical support and user training to end-users, enabling efficient adoption and utilization of the support portal and the core banking system.

This experience honed my skills in full-stack development, systems integration, and collaborative problem-solving, positioning me to deliver impactful technology solutions in complex, customer-centric environments.

EDUCATION

Postgraduate Diploma - Information Technology

January 2024 - December 2024

National Open University of Nigeria

Course Work: Software Development Life Cycle, Object Oriented Programming.

Bachelor of Engineering - Electrical Engineering

January 2015 - December 2021

University of Lagos

Project: GreenHouse Automation using Programmable Logic Circuit(PLC)

SKILLS

Programming Languages

CSS, Javascript, Typescript.

Frameworks

React, Next, Node, Express.

Libraries

Bootstrap, Tailwind CSS, ShadCN UI.

Databases

MongoDB, MySQL, Oracle.

Tools

Git, Linux, Vim, VS Code.

CERTIFICATES

- [ALX Certificate of Software Engineering](#)
